Power Climber Wind First to Earn ASME A17.7/CSA B44.7-07

SEATTLE/BRUSSELS – Power Climber Wind, a division of SafeWorks, LLC has completed the rigorous testing and risk analysis required to earn certification by UL (Underwriters Laboratories) to ASME A17.7/CSA B44.7-07. Power Climber Wind is the first supplier of wind turbine elevators certified under this new North American process and standard.

Having this verification in place removes risk and uncertainty for Turbine Service Lift (TSL) owners in states or provinces that regulate Turbine Service Lifts as elevators. Simplifying the approval process is valuable as more turbine manufacturers are looking at TSL's as a necessity rather than an option, given newer turbine heights at 100 meters and above.

“With more than 60 years of leadership in putting people to work safely at elevation, we take safety very seriously. Working with standards bodies to increase safety for users is a critical focus for us. Just as we pioneered compliance of our TSL's to Europe's new Machinery Directive 2006/42/EC in 2010, earning ASME A17.7/CSA B44.7-07 certification again demonstrates Power Climber Wind's technical leadership and commitment to meeting our customers needs in an evolving market. Turbine manufacturers trust Power Climber Wind to continue to solve safety regulations wherever their work takes them,” comments Gregory Crew, Global Wind Product Manager.
