Service Lifts Operate Successfully in Three Australian Wind Farms

SEATTLE/BRUSSELS — Power Climber Wind, a division of SafeWorks, LLC, completed the installation of 119 turbine service lifts (TSLs) at three separate wind farms in Australia for the world's fifth largest wind turbine supplier.

These TSLs are now operating successfully at AGL Bluff, North Brown Hill and Oaklands Hill wind farms with the combined generating capacity of nearly 250 mega watts of renewable energy in various regions of the country.

With close to 10,000 service lifts supplied worldwide, Power Climber Wind designs and supplies custom turbine service lifts that meet the highest global safety standards. These TSLs are UL-listed and CE-approved for many leading WTG and are manufactured in an ISO 9001:2008 certified facility.

The TSLs safely transport technicians at 24m/min to the top of towers to service equipment – far preferable to technicians climbing the towers' 100 meter ladders multiple times per day.

“As the only TSL manufacturer who owns its hoist and total solution design, Power Climber Wind is recognized for superior reliability and support to wind plant operators,” said Ruben Bake, Vice President and General Manager. “Our customers’ confidence in our TSLs shows – we’re working three shifts to meet the increased demand.”
