## **Power Climber Wind Announces A17.1 Approvals**

BRUSSELS/SEATTLE—Power Climber Wind, a division of SafeWorks, LLC completed all testing to earn A17.1 compliance approvals in Iowa and Washington state. Power Climber Wind earned the first North American A17.1 approval for Turbine Service Lifts in early 2007.

In US states that recognize Turbine Service Lifts (TSLs) as elevators, this credential ensures Power Climber Wind TSL installations under the elevator code with annual inspection and recertification requirements provided by state and independent elevator inspectors. For the Canadian provinces which apply the B44.1 standard to TSLs, Power Climber Wind's TSLs comply similarly.

Power Climber Wind works closely with our customers installing TSLs in geographies requiring elevator certification to ensure a code-compliant product selection and installation process..

“We are honored to have earned market leadership from putting people to work safely at elevation for more than 60 years. We take this trust very seriously. There are no compromises on code compliance. When a new technology emerges, some may claim code compliance while the market sorts out its regulations. Just as it voluntarily earned UL and CUL approvals, Power Climber Wind has committed its resources to helping our partners navigate the A17.1 and A17.7 regulations with safety and integrity, and will continue to do so,” comments Gavin Brickell, Engineering Director. Mr. Brickell is a member of the ANSI A120.1 committee, founding member of AWEA's Safety Committee and member of ASME's A17.1 section 5.11 committee.

Buyer beware is never more important than in a challenging economy. On top of ISO-9001 compliant manufacturing and quality processes, accredited training programs, and factory-certified technicians preparing equipment to our intensive standardized procedures, Power Climber Wind customers can trust in the A17.1 compliant product we provide.
