## Power Climber Wind Supplies 265 IBEX® 1000P Climb Assist Systems in Quebec

SEATTLE/BRUSSELS — Power Climber Wind, a division of SafeWorks, LLC, will be providing close to three hundred IBEX® 1000P climb assist systems to a leading international manufacturer of onshore and offshore wind turbines for three separate wind plants based in Quebec – Massif du Sud, Lac Alfred and Saint-Robert-Bellarmin.

The IBEX® 1000P systems will be installed on 75 turbines at Massif du Sud, 150 turbines at Lac Alfred and 40 turbines at Saint-Robert-Bellarmin wind sites by the end of this year. The innovative features of the IBEX® 1000P's portable control box, weighing only 8.5 lbs (4 kgs), set new standards for portability and durability. In addition to its IP 56 rating and robust design, the control box is thoroughly life-cycle tested and weatherproofed, and provides a safe, reliable and controlled up-tower climb for technicians in any tower, even in harsh climate conditions.

“Our Canadian customers see the benefits and value in the IBEX® 1000P,” said Mike Russell, National Sales Director. “The system improves employee morale and lives up to its reputation of a market-leading tool by increasing productivity, improving health and safety, and reducing the long-term wear and tear from climbing multiple ladders each day.”

These wind projects will have the average capacity to produce 400 MW of power, creating more jobs and electricity to about 75,000 homes in that region of Quebec.
