Power Climber Wind Provides IBEX[®] Climb Assist Systems in France

SEATTLE/BRUSSELS — Power Climber Wind, a division of SafeWorks, LLC, has installed forty-five IBEX[®] climb assist systems in France for EOLE-RES, one of the top developers of renewable energy production in the Mediterranean region and the Middle east.

The IBEX[®] system puts complete control of the climbing experience in the hands of the wind turbine technician, delivering personalized performance, increased safety, and better productivity. The IBEX[®] 1000 utilizes a patented closed feedback loop and EasyClimb Controller and responds to the climber's movement and behavior.

EOLE-RES selected the IBEX[®] 1000 for installation on turbines at three of the wind farms it manages on behalf of The Renewables Infrastructure Group – Haut Languedoc, Haut Cabardès, and Roussas Claves.

“Our French customers see the benefits and value in the intelligent IBEX[®] climb assist,” said Edwin Holtkamp, Director of Sales – Power Climber International. “Our market-leading climb assist provided a complete retrofit program for these EOLE-RES managed wind farms, further enhancing the health and safety conditions for the climbers.”

For more information on Power Climber Wind's IBEX[®] climb assist, view our videos and brochures at <http://www.powerclimberwind.com/Ibex1000.aspx>
